Projects

Blood Bank Management
Designed a web application to send message to the blood donor according to the needs of patients. In this system even volunteers can control the data.

Seattle Weather Prediction
Designed a Python based program to predict weather of a place e.g. Seattle by using machine learning concepts.

Parallel Pageranking
Designed a Python based program to search multiple words simultaneously to prioritize and rank the links that related to the words.

Smoke Level Detection
Designed an Arduino based application to detect smoke within a location and display the amount/level of smoke within that location.
